REPARED BY WILLIAM R. COWHERD, 2 polt al E. Jula

UTHORITY: CARL E. TREXLER, LtCol, USAF

General comments by the source on the interests and competence of two Soviet scientists. Source is a radiation biologist with an extensive background in applied research in the field of effects of neutron irradiation on a biological specimen. Source felt that the Soviet contributions did not present any new approaches to the problems of radiation biology but that the contributions did reveal a high level of Soviet competence in the field. (C)

1. The two Soviet scientists who made contributions at the Symposium on Biological Effects of Neutron Irradiations were V. I. IVANOV, Institute of Engineers and Physical Scientists, Moscow, and YU. I. MOSCALEV, Institute of Biophysics, Academy of Medical Science, Moscow.

2. V. I. IVANOV, in my opinion, would be described as a nealth-physicist with particular interest in neutron dosimetry. He appeared to be quite competent in his field. At the completion of a presentation which I made, Ivan v asked if I had indeed used a pulse-type reactor without a moderator as my neutron environment source. I answered his question affirmatively and he appeared to be quite astounded. Ivanov was a man of small stature, slender (140 lbs.), black hair,

very stern faced, and I would estimate his age to be approximately 35 years. He dressed in a typical Russian style, pin-striped suit, broad lapels and padded shoulders. He understood English very well but had difficulty speaking the language. (S)

- 3. YU. I. MOSKALEV would be described as a radiation biologist. He appeared to have a broad background in biology with lesser emphasis on physics. He was of medium stature, 175-185 lbs., and probably in his early 50's. As best I could determine, he neither spoke nor understood English. He, too, dressed in typical Russian style. (S)
- the Both of these Soviets impressed me as being very competent scientists. The work they presented was not anything new, but they were very well versed on its content. They answered questions graciously and fully and did not make an attempt to avoid questions on their work. They were very alert during the various sessions, took a copious amount of notes and asked questions of many of the contributors. (C)
- 5. From the work which the Soviets presented, it appeared that they were not involved in basic "ivory tower" type research, but rather in what we would call applied research. From the number of co-authors which appeared on their papers one would tend to think that a rather large effort was being made in this field. (C)
- 6. Repeatedly, the Soviets asked questions about the effects and measurement of intermediate-range (epi-thermal) neutrons (which have energies in the range 100 EV to 0.50 MEV). They indicated a great deal more interest in the intermediate range neutrons than did their U.S. counterparts. (S)
- 7. I heard through unofficial channels that the AEC was going to invite both Moskalev and Ivanov back to Brookhaven for one of their health-physics meetings sometime within the near future. I believe this would be an excellent chance for exploitation due to their willingness to discuss work in their field. (C)

Case 41357

Date 13 September 1963

Notice of Intelligence Potential

1. The Symposium on Biological Effects of Neutron Irradietions, sponsored by the International Atomic Energy Agency
(IANA) will be held at Brookbaven Rational Laboratory, Unton,
Long Island, New York from 7-11 October 1963. The Symposium
is a follow-up to the Symposium on Neutron Detection, Dosimetry
and Standardization, Harvell, England, 10-14 December 1962. The
Symposium program includes sessions on Dosimetry, Proton, Panel on
Biophysical Considerations in Neutron Experimentation, Cellular and
Genetic Effects, Pathology, and Relative Biological Effectiveness.

2. The following Soriets are scheduled to present papers as indicated:

AFARAS TEV, V. P., KEYRIM MARKUS, I. B., EMERTSOVA, S. E., LITY/SOVA, E.G., SOKOKOVA, I. K., STEVIKA, LE, Moscow-"Production and Investigation of Dose Fields for Irradiation of Experimental Animals with Protons of High Energy"

KETRIM JANKUS, I. B., KORMEYEV, V. T., MARKELOV, V. V., USFIZEKIY, L. R., Moscov-"The Measurement of Tissue Doses of Newtrons behind Resctor Shielding"

60-02547 MOSKALEV. Vu. I.. Institute of Biophysics, Academy of Medical Sciences USSR, PETROVICH, I. K., SIFEL TSOVA, Y. H. (MOSKALEV'S wife). "Riological effect of Fast heutrons and Protons of High Energy"

An additional Soviet scientist, name not given, is to present a paper on health and safety aspects of the use of neutrons.

3. CD/00 will have a number of cleared sources in attendance. Requirements classified through SECRET are invited and should be received in this division by 30 September 1963 if they are are to be utilized for brigging purposes.

Sutherland replied that he was sure that he had read in some briefing material for the trip that this would be illegal. The Russian assured him it was not, since he had received many gifts from Americans which had been purchased in the dollar stores. Sutherland, still dubious, said that he would like to check this with the Embassy first. The Russian, chagrined, said that there was no point in doing that. The Embassy would say no. He then dropped the subject and offered to take Sutherland on a tour of the city, but Sutherland was dead tired and pleaded that he had to get some rest before catching the plane. The Russian became quite insistent, and it was with some difficulty that Sutherland was finally able to convince him that he did not want a last-minute tour of the city.

"I got the impression that he was trying to get me out of my room for some reason," explained Sutherland to the Science Officer. He related that in any case what he had mainly wanted to see someone in the Embassy about was a request from a former exchange scholar that he deliver a book and some records to friends of the latter in Novosibirsk. By sheer chance, said Sutherland, he had rented his house to a fellow who had returned from a sojourn in Akademgorodok in 1970. He had never actually met him, but by correspondence his tenant had asked him to undertake this small commission.

the Russian "After / had left," said Sutherland, "I/thought I had better come down to the Embassy, so I went down and walked up to a taxicab which was parked at the taxi stand in front of the hotel. I got in and asked to go to the American Embassy. The fellow refused. I got out and flagged down a cao which was passing. I had just told the driver I wanted to go to the American Embassy when the first cab driver got out of his car and came over and said something to the second one in Russian. The second one then also refused. I flagged down a third cab and exactly the same thing happened. I was pretty angry by this time and flagged down a fourth. I simply got in and said 'American Embassy'. The first cab driver was trying to speak to the driver, but I pushed him on the shoulder and told him to get going quickly. Fortunately, the driver ignored the first cab driver and drove off, leaving him standing in the street. Otherwise, I don't know whether I would ever have got here."

The Science Officer asked who Sutherland's tenant in the U.S. was and what were the gifts for the Soviet citizens. Sutherland replied that the tenant was Stephen Salomon, and the gifts were:

1. A Hebrew grammar for Yakov Simonovich GRINEERG

Phonograph records for Viktor Aleksandrovich BOGATYREV, Svetlana KRAVCHENKO, 780BILEV, and Yura LOBURETS

Sutherland had brought these to the Embassy and left them.

The Science Officer advised Dr. Sutherland that it would be extremely unwise for him to give these items to the intended recipients, since Salcmon had

Moscow A-969 Page 3

figured as the villain in a MGE-inspired spy expose in May of this year also involving the Cultural Counselor of the Embassy. The Science Officer asked if there were any way in which the KGB might have become aware of his connection with Salomon. Had his baggage been left in the room alone? Sutherland replied that Salomon had written him that he would write the intended recipients that Sutherland would come bearing gifts for them. Each package was also neatly addressed. He saw no evidence of tampering with his baggage, which had been delivered quite quickly from the plane.

The Science Officer told Sutherland that the KGB had probably just intercepted the letters and the mysterious behavior of his visitor was probably designed to lure him away from his baggage to permit inspection. The authorities would normally inspect the baggage of a person on their alert list at the airport, but Sutherland had arrived a day earlier than expected and had evidently received only perfunctory attention. Sutherland was advised not to contact the individuals concerned, who were probably in enough trouble as it was, and if questioned about the gifts to say that he had forgotten to bring them and offer to send them later when he returned, or some such vague reply. He was also told to be alert to any attempt to compromise him while in the USSA.

Comment: The incident appears to be a typical bit of KGB harky-parky. It is possible that Sutherland will have some problems during his tay as a result of the naivete of Mr. Salamon (all too common among exchange scientists). It is indeed discouraging that even a visitor libelled by name as a "secret agent" of the "imperialists" in the Soviet press could still imagine that he could freely communicate with "friends" in the Soviet Union!

Case 41357

Date 13 September 1963

Kotice of Intelligence Potential

1. The Symposium on Biological Effects of Neutron Irradiations, sponsored by the International Atomic Energy Agency (IALA) will be held at Brookhaven Estional Laboratory, Upton, Long Island, New York from 7-11 October 1963. The Symposium is not follow-up to the Symposium on Neutron Detection, Dominatry and Standardization, Harwell, England, 10-14 December 1962. The Symposium program includes sessions on Dosimetry, Proton, Panel on Biophysical Considerations in Neutron Experimentation, Cellular and Genetic Effects, Pathology, and Relative Biological Effectiveness.

2. The following Soviets are scheduled to present papers as indicated:

AFARAS YEV, V. P., KEYRIM FAREUS, I. B., DEZNETSOVA, S. E., LITYZOVA, E.G., SOKOKOVA, I. K., STEZIKA, LE, Moscow-"Production and Investigation of Dose Fields for Irradiation of Experimental Animals with Protons of High Energy"

KEYRIA ARKUS, I. B., KORNEYEV, V. T., MARKELOV, V. V., USPINSKIY, L. K., Moscov-"The Measurement of Tissue Doses of Newtrons behind Resctor Shielding"

Go-2547 MOSKALEV. V. I. Institute of Biophysics, Academy of Medical Sciences USSR, PETROVICH, I. K., STREL*TSOVA, V. F. (MOSKALEV'S wife). "Biological effect of Fast Ecutrons and Protons of High Energy"

An additional Soviet scientist, name not given, is to present a paper on health and safety aspects of the use of neutrons.

3. CD/OO will have a number of cleared sources in attendance. Requirements classified through SECRET are invited and should be received in this division by 30 September 1963 if they are are to be utilized for briering purposes.

INT LAB TAR	SUBJECT: A Murky Business Involving Exchange Scientist Dr. Patrick J. Sutherland
TR XMB AIR	REF :
3 16 5	
CSQ USIA NEA	On August 16, Dr. Sutherland, a geologist came to the Embassy to seek the advice and opinion of the Science Officer concerning some troubling behavior
34 10 3-	on the part of certain officials of the Academy of Sciences of the USSR toward him.
4 1 6	He arrived on August 15 and contacted Yuriy MOSKALEV in the Foreign Relations
13/11 SEP 1 AM 10 42 COPYFLO-PBR	Department, who visited him to clear up some confusion concerning Sutherland's travel arrangements to Novosibirsk (Akademgorodok). Moskalev said that a colleague from the Foreign Relations Section would visit Sutherland at 5:30 p. on the 16th. A Russian about 35 years of age with thick black hair, whose name Sutherland could not recall, presented himself at Sutherland's room in the Academy of Sciences Hotel. He said he was a "linguist" rather than a scientist, and, after a few preliminaries asked whether Sutherland had any "non-scientific books" with him. As it happened, Sutherland had a few presentation paper backs which he had picked up at the cultural section and a couple of unread US newsmagazines. The Russian asked if he might have them, and was quite insistent about it. Sutherland gave him the books, thinking he could get more at the Embassy. The Russian asked also if he might have the newsmagazines. Sutherland protested that he had not read them yet, whereupon the Russian expressed the hope that he would have read them before he caught the plane that night and could give them to him. "Is this all the books you have?" asked the Russian. Sutherland assured him it was.
	Sutherland, already suspicious, was then quite surprised when the Fussian asked if he could do him a small favor. "Today is my mother-in-law's birthday; I have to buy a gift for her, but there is nothing suitable in the ordinary shops. I am sure I could find something in one of the dollar stores. If you went with me you could buy it and I would reimburse you." Group 3 SECRET FOR DEPT. USE ONLY Contents and Classification of the dollar property by:
Drafted by: SCI:WNHarl	pen/oln 8/24/71 ECON: WNHarben
	riewicz (ir draft) AH ADCM:TRBuchanan

Sutherland replied that he was sure that he had read in some briefing material for the trip that this would be illegal. The Russian assured him it was not, since he had received many gifts from Americans which had been purchased in the dollar stores. Sutherland, still dubious, said that he would like to check this with the Embassy first. The Russian, chagrined, said that there was no point in doing that. The Embassy would say no. He then dropped the subject and offered to take Sutherland on a tour of the city, but Sutherland was dead tired and pleaded that he had to get some rest before catching the plane. The Russian became quite insistent, and it was with some difficulty that Sutherland was finally able to convince him that he did not want a last-minute tour of the city.

"I got the impression that he was trying to get me out of my room for some reason," explained Sutherland to the Science Officer. He related that in any case what he had mainly wanted to see someone in the Embassy about was a request from a former exchange scholar that he deliver a book and some records to friends of the latter in Novosibirsk. By sheer chance, said Sutherland, he had rented his house to a fellow who had returned from a sojourn in Akademgorodok in 1970. He had never actually met him, but by correspondence his tenant had asked him to undertake this small commission.

the Russian "After / had left," said Sutherland, "I/thought I had better come down to the Embassy, so I went down and walked up to a taxicab which was parked at the taxi stand in front of the notel. I got in and asked to go to the American Embassy. The fellow refused. I got out and flagged down a cab which was passing. I had just told the driver I wanted to go to the American Embassy when the first cab driver got out of his car and came over and said something to the second one in Russian. The second one then also refused. I flagged down a third cab and exactly the same thing happened. I was pretty angry by this time and flagged down a fourth. I simply got in and said 'American Embassy'. The first cab driver was trying to speak to the driver, but I pushed him on the shoulder and told him to get going quickly. Fortunately, the driver ignored the first cab driver and drove off, leaving him standing in the street. Otherwise, I don't know whether I would ever have got here."

The Science Officer asked who Sutherland's tenant in the U.S. was and what were the gifts for the Soviet cirizens. Sutherland replied that the tenant was Stephen Salomon, and the gifts were:

A Hebrew grammar for Yakov Simonovich GRINEERG

Phonograph records for Viktor Aleksandrovich BOGATYREV, Svetlana KRAVCHENKO, 780BILEV, and Yura LOBURETS

Sutherland had brought these to the Embassy and left them.

The Science Officer advised Dr. Sutherland that it would be extremely unwise for him to give these items to the intended recipients, since Salcmon had

SECRET

SECRET

Moscow A-969 Page 3

figured as the villain in a KGE-inspired spy expose in May of this year also involving the Cultural Counselor of the Embassy. The Science Officer asked if there were any way in which the KGB might have become aware of his connection with Salomon. Had his baggage been left in the room alone? Sutherland replied that Salomon had written him that he would write the intended recipients that Sutherland would come bearing gifts for them. Each package was also neatly addressed. He saw no evidence of tempering with his baggage, which had been delivered quite quickly from the plane.

The Science Officer told Sutherland that the KGB had probably just intercepted the letters and the mysterious behavior of his Visitor was probably designed to lure him away from his baggage to permit inspection. The authorities would normally inspect the baggage of a person on their alert list at the airport, but Sutherland had arrived a day earlier than expected and had evidently received only perfunctory attention. Sutherland was advised not to contact the individuals concerned, who were probably in enough trouble as it was, and if questioned about the gifts to say that he had forgotten to bring them and offer to send them later when he returned, or some such vague reply. He was also told to be alert to any attempt to compromise him while in the USSA.

Comment: The incident appears to be a typical bit of KGB harky-parky. It is possible that Sutherland will have some problems during his tay as a result of the naivete of Mr. Salamon (all too common among exchange scientists). It is indeed discouraging that even a visitor libelled by name as a "secret agent" of the "imperialists" in the Soviet press could still imagine that he could freely communicate with "friends" in the Soviet Union:
